By David Bailey

The UK engineering sector has been in decline for decades, and the Brexit vote has only exacerbated the problem. This book provides an inside view of the challenges facing the UK engineering sector and offers some solutions for how to address them.

Based on extensive research and interviews with key figures in the industry, this book provides a comprehensive overview of the state of the UK engineering sector. It examines the factors that have contributed to the decline of the sector, including the loss of manufacturing jobs to overseas competitors, the lack of investment in research and development, and the skills gap in the workforce.

The book also looks at the impact of Brexit on the engineering sector. It argues that the UK's decision to leave the European Union has created uncertainty for businesses and made it more difficult for them to compete in the global marketplace.

However, the book also argues that the UK engineering sector has the potential to recover and grow. It identifies a number of key challenges that need to be addressed, including the need to invest more in research and development, to improve the skills of the workforce, and to create a more supportive policy environment for businesses.

This book is an essential resource for anyone who wants to understand the challenges facing the UK engineering sector and the role that it can play in the UK economy. It is a must-read for policymakers, business leaders, and anyone interested in the future of the UK economy.
