Excerpt

From the chapter on "The History of the Universe":

“The universe began as a singularity, a point of infinite density and heat. Then, about 13.8 billion years ago, it exploded in a Big Bang. This explosion created all of the matter and energy in the universe, and it has been expanding ever since.

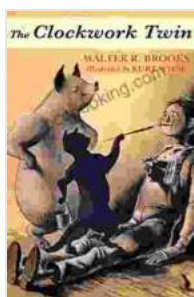

The early universe was very hot and dense. As it expanded, it cooled and became less dense. This allowed atoms to form, and eventually stars and galaxies began to form.

The universe has been expanding for billions of years, and it is still expanding today. Scientists believe that the universe will continue to expand forever, and that it will eventually become cold and dark.”

Freddy The Pig On Everything is a must-read for anyone who wants to understand the world around them. It's a book that will make you think, make you laugh, and make you see the world in a whole new way.
